## **Review of Online Glaucoma Video Content for Patients**

Photo courtesy of Photo by Yan Krukau of pexels.com

A recent study reviewed glaucoma videos found online for glaucoma patients. Reviewers omitted videos meant for glaucoma professionals, and those longer than 15 minutes. It rated aspects such as language, word choice, understandability, cultural representation, organization, and visual aids. Reviewers concluded that there is room for improvement regarding language accessibility, understandability, and cultural inclusivity of publicly available educational glaucoma videos for patients.
